MODULAR RETREAT
The curves of the House Arc shed—and its integral wooden shade superstructure—echo the “wave” of the backyard’s deck (page 45). Its footprint is a mere 8 by 12 feet, and the steel-tube frame keeps the weight down to 3,000 pounds. Palo Alto,

California–based architect Joseph Bellomo designed the House Arc with an eye toward supplying easy-to-build emergency housing, but the units are equally suited to providing extra storage, entertainment space, or even a guest room.

“The House Arc can be a backyard office, a yoga room, or housing in the most in-need places: It’s for everyone, everywhere.” —JOSEPH BELLOMO, ARCHITECT
